Offshore Publications Program

Publication Series

The Minerals Management Service (MMS) established a scientific and technical publications program for Offshore Minerals Management in 1984. The objective of the program is to make the investigative findings of the Offshore Program available to the public. The Technical Publications Unit (TPU) within the Office of Offshore Information and Publications operates this program. The TPU has assigned series designations and publication numbers to scientific and technical documents issued by the Offshore Program since January 1, 1984. Documents are numbered consecutively within each calendar year and assigned one of the series designations listed on this page.

Informal Documents

Informal documents are those requiring quick release to the public. They comprise the following Outer Continental Shelf (OCS) series:

OCS Reports
Continental offshore stratigraphic test (COST) well reports, investigations, risk analyses, resource estimates, environmental impact statement (EIS) support documents, preliminary reports, etc.

OCS Studies
Contractually prepared environmental and socioeconomic, resource evaluation, and technological studies.

OCS Maps
Geologic, bathymetric, resource, biogeologic, and coastal maps. (Some resource and coastal maps and atlases may be considered formal because of their long-term interest and use of color; however, MMS places all maps in the OCS Map series.)

Formal Documents

Formal documents are those reports with broad or long-term interest to the public. They comprise the following OCS series:

OCS Monographs
Various technical and professional papers.

OCS Information Reports
OCS Information Program (OCSIP) documents.

OCS Standards
Platform verifications, well-control training, best available and safest technology (BAST), etc.

OCS Environmental Impact Statements/Environmental Assessments (EIS/EA)
Draft EIS, final EIS, and regional or areawide EA.

U.S. Department of the Interior
Minerals Management Service

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interest of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. Administration.
